Excerpt from Electrical Engineering Papers, 1919: A Collection of the Author's More Important Engineering Papers Presented Before Various Technical Societies and Published in Engineering Journals and Elsewhere From Time to Time It is necessary to understand the characteristics of the poly phase motor in order to consider properly its application to the different classes of work to be met with in practice. These characteristics can be presented in the most intelligible manner by means of curves, which represent the relations between the speed, torque or turning effort, horse power expended and developed, amperes, etc. The speed-torque curve, which represents the speed in terms of the torque, is the most important one, as upon this depends the adaptability of the motor to the various kinds of work. The starting conditions also depend upon the speed-torque characteristics. The other curves that are of importance in practice are the current, efficiency and power factor. As these are dependent, to some extent, upon the speed-torque curve, this will be considered first. Before treating of its characteristics a short description of the motor itself will be given.
