AXIAL ABERRATIONS OF LENSES (CLASSIC REPRINT) (PAPERBACK)

Forgotten Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Axial Aberrations of Lenses Here a compromise must often be made between the center and the edge of the field. In these systems the color must be well corrected to avoid chemical focus or the blurring of the image, due to the actinic rays focusing nearer to (or farther from) the lens than the visual. Especially is the color correction important in lenses used for color photography and in process lenses. In astrographic lenses, those used in stellar photography, a field is required which is large relative to telescopic systems but small compared with lenses for ordinary photography. Over this field they are required to be corrected very accurately with regard to all aberrations, though color is of secondary importance, since a color screen, or plates which are sensitive only to a short range of the spectrum, may be used. In portrait lenses the central definition is of greater importance than that of any other part of the field, since focusing on the eyes of the sitter will give sharp definition there and produce the effect of concentrating the attention on the expression without directing it to less important details. In all cases the central definition is very important and the determination of the errors in the center of the field will generally give a comparative value of the lens. The central corrections show, with very few exceptions, the highest quality of definition a lens will give. Even in a lens with a large field, when a compromise must be made between the center and edge of the field, the central definition must be at least as good as the edge, if not better. About the Publisher Forgotten Books publishes...
