

Report of progress in the Cambria and Somerset district of the bituminous coal-fields of western Pennsylvania Volume 2

By Franklin Platt

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 66 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1877 Excerpt: . . . slates; it measures three feet thick and yields a fair quality of coal. It shows: Fig. 37. Black slate. Coal Floor Bed E. --About one-third of a mile east of this exposure an overlying seam of coal occurs much higher up in the hills. The vertical distance between the beds was estimated to be as much as 100 feet, and the upper coal was therefore adjudged to be Bed E. The outcrop of the bed gives four feet of coal, with a parting of slate one and a half inches in thickness, about one foot above the floor. Serai Conglomerate. Clearfield creek at Condrons saw mill, No. 11, is filled with large masses of Conglomerate (XII.) The same rock also extends up the hillsides for 50 feet above the creek; it is here a a close, compact, fine-grained sandstone. A small seam of coal is...
