

The Anatomy of Woody Plants

Filesize: 1.71 MB

Reviews

Thorough manual for pdf lovers. I am quite late in start reading this one, but better then never. It is extremely difficult to leave it before concluding, once you begin to read the book.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 Excerpt: .in many other cases we find the infliction of wounds followed by the formation of features which are normally present in the conservative organs. Consequently the doctrine of reversion finds support, not only in the facts of paleobotanical anatomy, but also in the much more richly exemplified doctrine of conservative parts. It is further clear that we cannot interpret all structural peculiarities which result from injury as reversions to a former condition of organization, but only those which are definitely paralleled by known conditions in fossil forms or are illustrated in the anatomy of the conservative organs--the leaf, reproductive axis, and stem, or at least some of these. Carefully as the doctrines of recapitulation and of conservative parts must be applied to elucidate the course of evolution, the principle of reversion must be invoked in phylogenetic studies with even greater precautions. A wide knowledge of fossil forms as well as an extensive acquaintance with the facts of comparative anatomy are necessary for a successful application of this doctrine to the data derived from the investigation of injuries. In this connection it is further necessary to distinguish clearly between the phenomena of hypertrophy and those of actual reversion. For example, when the stem of a dicotyledon or of a conifer is injured, a local damming of food substances results as a consequence of the elimination of the conducting tissues of the phloem in the immediate vicinity of the wound. Overdevelopment consequent on overnutrition accordingly is locally most...
