We have succeeded in extending, the. Solubility measurements down to 28 C. Our data on this branch of the curve must be considered approximate, since the. Experimental difficulties were considerable. In the vicinity of 100 C the anhydrous b-dextrose becomes the stable solid phase. We have not attempted to determine. The transformation point or the solubilities. It, is possible to predict; however, that the solubility curve of the B-compound lies very. Close to the prolongation of the or, since their observed melting points are very close together. The B-dextrose melts at 148 C, the a at 146 C. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
