Thomson to the measurement of the capacity of cables. If the poles of a battery are connected through a high resistance  $J$ , +  $J_i$  and a point  $F$  is connected with earth, its potential becomes zero and points on either side separated from it by equal resistances are at equal but  $X F$  Fig. 21. sistances are unequal, opposite potentials. If the re Charge the two condensers by making contact on opposite sides of  $F$  at such points that their charges just neutralize. If  $A$  and  $C$  are the points, (d) Charge the condenser and discharge it through a galvanometer, noting the deflection; charge it again to the original potential and allow it to discharge slowly through a very high resistance. After discharging a definite time  $T$ , note the deflection it will give when connected directly to the galvanometer. Then  $T$  Capacity  $= -p$ ;  $2.303 R, \log -V$  and  $v$  are potentials, but as the ratio only is needed, this can be obtained from the ratio of the two deflections. 54. Determination of the Ohm ( 364). If a coil is rotated in a magnetic field a current is induced, which deflects a needle at the centre of the coil. The force exerted by this current may be shown to be  $L-VH$ , and the moment acting on a magnet deflected  $/2 VH$  through an angle  $\theta$  is  $ml \cos \theta$ , where  $L$  is the 4 -length of the coil,  $K$ the velocity...
