

Solidification science and technology and materials development - Hengzhi academicians from teaching 60th anniversary of the scientific papers selected (fine)

Filesize: 9.36 MB

Reviews

The most effective ebook i possibly go through. I am quite late in start reading this one, but better then never. Its been designed in an extremely basic way and it is just after i finished reading this ebook by which basically transformed me, modify the way i believe.
(Giovanny Rowe)

SOLIDIFICATION SCIENCE AND TECHNOLOGY AND MATERIALS DEVELOPMENT - HENGZHI ACADEMICIANS FROM TEACHING 60TH ANNIVERSARY OF THE SCIENTIFIC PAPERS SELECTED (FINE)

DOWNLOAD

paperback. Condition: New. Ship out in 2 business day, And Fast shipping, Free Tracking number will be provided after the shipment. Pages Number: 679 Publisher: Science Pub. Date :2009-06-01 version 1. Hengzhi hospital land engaged in high-temperature materials and solidification science and technology teaching and research since 1962. a total of Papers of more than 600 articles. Book is a collection of representative papers 89. covering solidification science and technology and materials development. the solidification process of high temperature alloys (and intermetallic compounds) solidified control. function and ceramic materials. solidification processing. no / cold crucible electromagnetic constraints directional solidification. multiphase solidification characteristics of six aspects. This book is available in physical metallurgy. materials science and technology research and education to staff. Contents: The first part of the solidification science and technology and material development of solidification science and technology and materials. the second part of the solidification process of high temperature alloys of non-equilibrium solidification characteristics of melt superheating on Al-Cu alloy directionally solidified some special} health effects of Ni-Cr- Mo ternary alloy solidification interface morphology and solute distribution Effect of local solidification time on the dendrite-to-cell transition at high growth rates the liquid-solid phase transition in the interface shape selection interface kinetics on the level of the interface stability of the sub-fast single- to the solidification crystal growth of non-steady state evolution Near rapid directional solidification and its superfine microstructure sub-rapid solidification of dendritic-cell crystal changes the theoretical study of Cu-Ni single phase alloy undercooled solidification process of Mesoscopic kinetics of nonequilibrium solidification High rate directional solidification and its application in single crystal superalloys The transition mode of dilute binary alloys during directional solidification near to the absolute stability limit A multi-layer interface partition model for nonequilibrium solidification temperature intermetallic compounds of directional solidification characteristics of peritectic alloy solidification planar front of the form...
