Two triedral angles are either equal or symmetrical, when the three face angles of one are respectively equal to the three face angles of the other. In the triefra-angles S and s, let $ASB = asb$, $ASC = asc$, and $BSC = bsc$; then, the diedral angle SA is equal to tLe diedral angle sa. On the edges of these angles take the six equal distances SA, SB, SO, sa, sb, sc, and draw AB, BC, AC, ab, be, ac. The isosceles triangles SAB and sab are equal, having an equal angle included by equal sides, hence $AB = ab$; and for the same reason, $BC = be$, $AC = ac$; therefore, the triangles ABC and abc are equal. At any point D in SA,...
