Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Excerpt from Fats and Fatty Degeneration: A Physico-Chemical Study of Emulsions and the Normal and Abnormal Distribution of Fat in Protoplasm The following pages give in collected and somewhat simplified form the results of experiments which have not previously been published in English, excepting in abstract form in Science. While our earlier colloid-chemical studies had compelled a desultory consideration of some of the problems here dealt with, this detailed study of the question of the fat in the cells is less than two years old. We turned to this fat problem in order to escape from older colloid-chemical studies on (edema, nephritis and allied subjects. In this, however, we were early doomed to disappointment. Without intent on our part, the conclusions of these newer studies dovetail with and corroborate the older ones. A house previously looked at from within is here seen from without but it is the same house. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
