*Absolutely one of the best book I have ever study. It is actually writter in simple terms rather than confusing. I realized this pdf from my dad and i suggested this pdf to understand.*

OCLC Number: (OCoLC)50732264 Excerpt: . . . Effect of Crack Path Orientation Fatigue crack growth rates of T-L, L-T and 45 oriented Ti 6-2-2-2-2 specimens at room temperature and T-L and 45 oriented Ti 6-2-2-2-2 specimens at 177 C are shown in Figures 17 and 18, respectively. At 24 C, T-L and L-T orientations exhibit similar fatigue crack growth rate characteristics except at moderate values of  $K$  ( between 7. 7 and 16. 5 MPa m ) where the T-L orientation was found to have a slightly higher ( approximately 1. 5 times greater )  $da/dN$  compared to the L-T orientation. The fatigue crack growth behavior observed for the 45 orientation is different than the behavior for either the T-L or L-T orientations ( Fig. 17 ). The 2. 6 T-L and L-T Paris regime fatigue crack growth curves are approximately described by a  $K^{4. 5}$  power law while the 45 orientation is characterized by a single  $K$  power law. The fatigue 2. 2 crack growth characteristics at elevated temperature ( Fig. 18 ) are described by a  $K$  power law 3. 5 for the T-L orientation and a  $K$  power law for the 45 orientation. Figure 19 is a plot of lower-Paris to threshold regime  $da/dN$  versus  $K$  data for L-T oriented specimens. As was observed for the T-L orientation,  $K$  is shown to decrease with th increasing  $K$ . Table VI lists values of  $K$  for each of the tests represented in Figure 19. The max th-10  $K$  values are approximated using the ASTM guideline of...
